PROFILE

Lead software engineer with 7.5+ years in financial services, building backend systems, modernising applications, and delivering enterprise AI capabilities. Hands-on implementation alongside architecture reviews, performance optimisation, and guidance for teammates delivering modernisation work across teams.

EXPERIENCE

Capgemini

Financial services engineering

Manager – Lead Software Engineer

May 2023 – Present

Mumbai, India

April 2026 – Present

- Leading the **phased modernisation of a Python and React infrastructure dashboard**. Reviewed the codebase, defined architectural changes, and guided implementation of a structured backend and REST APIs. Both applications are deployed on Rancher; data-pipeline and storage improvements remain ongoing.
- Built and deployed a **.NET API over legal business data**, making previously inaccessible data available to other teams. Established its deployment configuration and brought the service onto Rancher.
- Built a **Python financial-data API** and established a maintainable reference implementation for continued development.
- Resolved a **production performance bottleneck in financial-data APIs** by restructuring LINQ queries and processing paths, reducing pod memory from 6–7 GB to about 1 GB and endpoint response time from roughly five minutes to 40 seconds.
- Guide **teammates delivering modernisation work**, reviewing architectural decisions and supporting adoption of established CI and deployment practices.
- Built supporting tools for **Rancher onboarding** and **Informatica-to-Python/Prefect migration**, including code generation and persistent progress tracking.
- Unblocked a **regulatory web-scraping application** by deploying a Playwright browser runtime on Rancher. Addressed Chromium deployment constraints, configured Helm/Flux deployment, and established the remote browser connection for Crawl4AI.

Senior Consultant – Senior Software Engineer

May 2023 – March 2026

- Designed a **modular knowledge-management and RAG template** with scanned-document support, configurable ingestion, and built-in authentication. Adopted as the account standard and used for contract-field extraction; recognised in the CIO newsletter in 2026.
- Built **adaptive extraction within the template** using LangGraph and vector retrieval. Returns fields with supporting evidence and focuses subsequent passes on missing fields. Supports reusable presets and on-demand schemas.
- Extended enterprise knowledge to **Claude Code and Copilot CLI through MCP**, with group-based authorisation and time-limited credentials.
- Brought an existing **PDF clause-extraction application into production** through codebase modernisation, environment integration, and automated deployment. Adapted OCR and model delivery to the firm's constraints. Running reliably on Rancher for about a year; recognised in the CIO newsletter.
- Modernised **.NET services and onboarded React microfrontends and NestJS APIs to Rancher**, supporting the move from Windows hosting to Kubernetes. Upgraded .NET Core 3.1 services to .NET 6/8, adopted established GitLab CI templates, and resolved build and deployment issues with Helm and Flux.
- Migrated Solace messaging workloads to Kubernetes and resolved reliability and deployment issues. Contributed to critical incident recovery as part of a global engineering team.

EARLIER EXPERIENCE

Senior Software Engineer

December 2021 – May 2023

Accenture Solutions Pvt. Ltd

Mumbai, India

- Led API design for moving legacy C# class-library features to ASP.NET Core, defining error handling and service structure while retaining compatibility with Duck Creek's insurance configuration model.
- Built an email-trigger application connecting a shared mailbox to the claims workflow using Azure Logic Apps, Blob Storage, and REST APIs. Established API documentation and automated quality checks for delivery.
- Configured Duck Creek Claims capabilities for property and casualty insurance workflows.

Software Engineer

December 2020 – December 2021

Accenture Solutions Pvt. Ltd

Mumbai, India

- Converted C# class-library features into REST APIs and integrated them with Azure API Management using JWT bearer authentication. Built HTTP-triggered Azure Functions and APIs to transfer documents between policy and claims applications.
- Developed a decompiler-based analysis tool to inspect application code and produce method and class metrics for development effort estimation.

Associate Software Engineer

October 2018 – December 2020

Accenture Solutions Pvt. Ltd

Mumbai, India

- Maintained and enhanced an insurance claims application through regular releases and upgraded ASP.NET applications. Built document extraction, migration, and verification tools for claims data and third-party storage integration.

TECHNICAL SKILLS

Backend: C#, .NET, Entity Framework Core, LINQ, Python, FastAPI, SQLAlchemy, REST APIs

Data & AI: SQL Server, Oracle, RAG, LangGraph, LangChain, ChromaDB, Tesseract OCR, MCP

Cloud & Delivery: Kubernetes, Rancher, Helm, Flux, Docker, GitLab CI, Azure, Solace

Quality & Tooling: xUnit, pytest, SonarQube, Nexus IQ, Git, OpenAPI, Playwright

Application Architecture: API design, service decomposition, codebase reviews, performance optimisation

CERTIFICATIONS

Microsoft Certified: Azure AI Fundamentals (2023)

Microsoft Certified: Azure Developer Associate (2020); Azure Fundamentals (2019)

Microsoft Certified: Security, Compliance, and Identity Fundamentals (2021)

Duck Creek Claims Configurator (2022); Claims Basic Configuration (2019)

EDUCATION

B.E. in Electronics and Telecommunication

September 2015 – July 2018

Vivekanand Education Society's Institute of Technology

Mumbai, India
