PROFILE

Software engineer with 7.5+ years in financial services, building backend systems, modernising applications, and delivering enterprise AI capabilities. Hands-on implementation alongside architecture reviews, performance optimisation, and guidance for teammates delivering modernisation work across teams.

EXPERIENCE

Senior Software Engineer

May 2023 – Present

Capgemini

Mumbai, India

- Designed a **modular knowledge-management and RAG template** with OCR for scanned documents, independently configurable ingestion modules, and Kerberos/JWT authentication. Adopted as the account standard and used by another team for contract-field extraction; recognised in the CIO newsletter in 2026.
- Built **adaptive extraction with LangGraph, LangChain, and ChromaDB**: schema-driven retrieval and reranking, source context and page references, and follow-up passes targeting only missing fields. Supports reusable presets and on-demand schemas with field types, validation rules, and examples.
- Extended the knowledge platform to **Claude Code and Copilot CLI through MCP**. Implemented group-based access checks before issuing JWT-based API keys with a 30-day expiry.
- Brought an existing **PDF clause-extraction application into production**, improving Python configuration, Linux compatibility for Tesseract OCR, and GitLab CI adoption. Packaged the all-MiniLM model from Nexus into the container for the RAG/FAISS backend. The Python API and React application were deployed on Rancher and have run reliably for about a year; recognised in the CIO newsletter for this contribution.
- Leading the **architecture review and phased modernisation of a Python and React dashboard** presenting application infrastructure data from ServiceNow. Reviewed the codebase and planned separation of frontend/backend responsibilities, Python restructuring, removal of spreadsheet dependencies, and REST API development. Both applications are now deployed on Rancher; Prefect flows and SQL-backed data storage are planned.
- Built a **.NET and Entity Framework Core API** over SQL Server tables and views, making existing business data accessible to other teams. Prepared Helm and Flux configuration and deployed the service to Rancher. Also built a **FastAPI service for financial data** backed by Oracle, establishing controller–service–repository boundaries and walking the team through extending it.
- Reduced the **memory footprint of financial-data APIs** through LINQ query optimisation and related implementation changes. Resolved browser deployment and connectivity blockers for a regulatory scraping application using Playwright on Rancher.
- Guide **teammates delivering application modernisation**, reviewing approaches and technical decisions. Drive adoption of the toolchain team's GitLab CI templates for builds, tests, SonarQube and Nexus IQ checks, and use of pipeline-built container images in Rancher deployments.
- Modernised legacy .NET applications through service decomposition, framework upgrades, and containerisation. Migrated Solace messaging services to Kubernetes, resolving failover, message redelivery, and consumer-group binding issues. Contributed to quarter-end incident recovery as part of a global SME team.
- Built supporting automation: a **Rancher onboarding skill** for repository setup, configuration validation, and service additions; and an **Informatica migration plugin** combining discovery, application-wide assessment, and equivalent Python/Prefect code generation with persistent progress tracking and internal runtime conventions.

EARLIER EXPERIENCE

Senior Software Engineer

December 2021 – May 2023

Accenture Solutions Pvt. Ltd

Mumbai, India

- Led API design for moving legacy C# class-library features to ASP.NET Core, defining error handling and service structure while retaining compatibility with Duck Creek's insurance configuration model.
- Built an email-trigger application connecting a shared mailbox to the claims workflow using Azure Logic Apps, Blob Storage, and REST APIs. Documented APIs with OpenAPI and Swagger, and used SonarQube, Azure DevOps, and Jenkins for quality checks and delivery.
- Configured Duck Creek Claims capabilities for property and casualty insurance, including reserves, payments, coverages, and assignment rules.

Software Engineer

December 2020 – December 2021

Accenture Solutions Pvt. Ltd

Mumbai, India

- Converted C# class-library features into REST APIs and integrated them with Azure API Management using JWT bearer authentication. Built HTTP-triggered Azure Functions and APIs to transfer documents between policy and claims applications.
- Developed a decompiler-based analysis tool to inspect application code and produce method and class metrics for development effort estimation.

Associate Software Engineer

October 2018 – December 2020

Accenture Solutions Pvt. Ltd

Mumbai, India

- Maintained and enhanced an insurance claims application through regular releases and upgraded ASP.NET applications. Built document extraction, migration, and verification tools for claims data and third-party storage integration.

TECHNICAL SKILLS

Backend: C#, .NET, Entity Framework Core, LINQ, Python, FastAPI, SQLAlchemy, REST APIs

Data & AI: SQL Server, Oracle, RAG, LangGraph, LangChain, ChromaDB, Tesseract OCR, MCP

Cloud & Delivery: Kubernetes, Rancher, Helm, Flux, Docker, GitLab CI, Azure, Solace

Quality & Tooling: xUnit, pytest, SonarQube, Nexus IQ, Git, OpenAPI, Playwright

Application Architecture: API design, service decomposition, codebase reviews, performance optimisation

CERTIFICATIONS

Microsoft Certified: Azure AI Fundamentals (2023)

Microsoft Certified: Azure Developer Associate (2020); Azure Fundamentals (2019)

Microsoft Certified: Security, Compliance, and Identity Fundamentals (2021)

Duck Creek Claims Configurator (2022); Claims Basic Configuration (2019)

EDUCATION

B.E. in Electronics and Telecommunication

Vivekanand Education Society's Institute of Technology

September 2015 – July 2018

Mumbai, India
